

Changelog FW version 1.7.0 for XWEB PRO series

1. Main changes

1.1 New features and changes

- The remote firmware update function has been implemented, via XWEB, for the XM700 series;
- Added devices info in system log: the address and name of the devices have been added for "Global Commands" and "Maintenance mode" operations.

1.2 Fixes

- Users belonging to the 'admin' role cannot edit the Admin user settings
- Time/date display in 12-hour format for US and GR languages
- The data report contained blank tables even though the data was available
- Consumption Analyzer graph time base
- Custom language label for commands
- UI shows the correct XWEB's AUX output
- Timestamp of the Last Record in System Info page
- Clone Device function
- Execute button in reports section works if user has correct "reports-data-read" permission
- Message when attempting to load an invalid upgrading file
- Other minor fixes.
