

Changelog FW version 1.8.0 for XWEB PRO series

Main changes

1. *New features and changes*

- A new dropdown button has been introduced on the side menu. Clicking on the username opens a menu that either allows access to the profile of the currently signed-in user (valid only for non-LDAP users) or to log out.
- Added the library import event to the System log.
- The background of the "table" widget (Layout) can vary depending on the alarm or defrosting state of the reference device.
- Increased the number of recipients for a single alarm notification.
- Introduced compatibility for Teltonika TRB140 and TRB142 modems." and "Maintenance mode" operations.

2. *Fixes*

- Restored filters for enabled variables and commands.
- Resolved the issue with sampling and plotting variables in FSM.
- Corrected the on/off state condition for hybrid devices.
- Other minor fixes.
